

REAL Research Hub

Project 2

Digestate Valorisation Survey

- Are you looking for new ways to use your digestate?
- Would you like to receive information on commercial and near-to-market technologies designed to add value to digestates?

The most recent project of REAL's Research Hub has two objectives:

- 1) Develop a 'data pack' on characteristics of digestates (whole, separated liquor and separated fibre) taking into consideration feedstock type(s)
- 2) Assess and report on the landscape for digestate-derived products and alternative uses, considering commercially ready and near-to-market technologies, to optimise digestate value

Towards this second objective, the project delivery team wish to engage with AD operators, technology providers and other stakeholders. For AD operators in particular, the team have set up a brief online survey to assess current digestate markets, drivers and constraints to alternative digestate use/product development.

If you are responsible for an AD site on the BCS please complete our 10-minute survey at <https://forms.office.com/r/dRbUuKK1q0>.

BCS participants will have access to the full report on project completion at no additional cost. Further information on the project can be found at [REAL Research Hub](#). Specific queries on the project should be directed to tom@solidsense.co.uk.
